EDUCATION

University of Toronto

Toronto, Canada

Bachelor of Science in Applied Statistics and Applied Mathematics

Expected Jun. 2027

First Generation Scholarship (\$1,000 CAD), Vice President of Computer Science Club

- Organized algorithm and LeetCode study sessions; shared latest AI trends and technical insights with members.

EXPERIENCE

Software Engineer

Jan. 2026 – Present

ADHDLock

Toronto

- Built an ADHD productivity tool predicting optimal focus intervals from behavioral session data, optimized break times based on time-of-day, session depth, and rest duration, drove **1000+ GitHub downloads**.
- Stored session logs in **PostgreSQL** and served low-latency reads via **Redis** with sub-second response; built the frontend dashboard with **React** for real-time session and break recommendations.
- Built and deployed **RESTful APIs (Node.js/Express)** for cross-device session synchronization and behavioral data aggregation, bootstrapping interval recommendations via cross-user pattern matching.
- Built a cloud-native ML pipeline on **AWS (Lambda, RDS, S3)** for bandit parameter storage, leveraged scheduled batch jobs to retrain cross-user models and served personalized predictions with sub-100ms latency.

Software Engineer

Feb. 2026 – Present

ElderMedAssist

Toronto

- Built a full-stack platform for elderly users to input medications, allergies, and health conditions; generated personalized care plans covering combined medication guidance, drove **100+ downloads** on Google Play.
- Invoked an **LLM** (Claude/OpenAI) for AI-powered care plan generation; containerized with **Docker** and built the frontend with **React** and **JavaScript** for elderly users to download tailored health instructions.
- Built an async architecture with **Celery + Redis** (local) and **SQS + Lambda** (AWS) to decouple long-running LLM inference from the request cycle, reducing perceived response time from **20s+ to under 2s**.
- Deployed to **AWS** (EC2, RDS, S3) with **Terraform** for reproducible infrastructure; achieved **90%+ unit test coverage** via pytest, monitored system health via **Prometheus + Grafana**

PROJECTS

SonicScript

Mar. 2026

- Built a privacy-first macOS speech-to-text app leveraging on-device **SFSpeechRecognizer** to eliminate cloud round-trips, reduced transcription latency **from 3+ to 1 second**; achieved **50+ GitHub stars**.
- Open-sourced with zero subscription fees, cutting user cost **from \$10+ to under \$1/month**; developed **AI-powered** Smart Edit that detects active applications and adapts output tone accordingly.
- Built transcript history and a custom Snippets library for saving frequently used phrases; implemented **long-press translation** mode converting any spoken language directly to English output.

TECHNICAL SKILLS

Languages: Python, Go, C++ , Ruby, JavaScript, TypeScript, Java, SQL

Frameworks & Platforms: FastAPI, Django, Django REST Framework, Ruby on Rails, React, Next.js, Node.js, GraphQL, LangChain, LangGraph, Spring AI, REST API, RAG

Databases: PostgreSQL, MongoDB, Redis, Kafka, Vector Databases

Developer Tools & Infrastructure: Linux, Git, Docker, Jenkins, Kubernetes, AWS (EC2, RDS, S3, SQS, Lambda), Terraform, Celery, Prometheus, Grafana
